Chris Christie
Governor
BEFORE...
New Jersey is the most densely populated state in the country. A large portion of the state’s residents live in high rise dwellings. The New Jersey Division of Fire Safety and your Local Fire Service suggest the following to keep yourself and your fellow residents safe from the “danger above.”

- **NEVER** lock or keep ajar, fire exits or doorways, they provide escape and may slow a fire’s path.
- Make sure through your resident’s group the building manager posts escape routes adjacent to elevators and in the lobby.
- Make sure your group is updated on all fire safety sprinklers and equipment, such as the most recent state fire code inspection.
- Make building fire safety an agenda item at your next tenant meeting.

DURING...
- **STAY CALM**
  - Dial 911 from your cell phone and report your location immediately.
  - Be patient. High-Rise evacuations take time.
  - If the front door is warm to the touch go to a window and wave a sheet or flashlight to rescue units below.
  - If it is not look low through the slot for hallway smoke. Be ready to close it if smoke is too dense. Use damp cloth to cover door creases.

AFTER...
- **ONCE YOU ARE OUT...STAY OUT**
  - Do not go back inside for any reason.
  - Tell firefighters if you know if anyone remains inside.
  - Only re-enter if given permission by emergency personnel.
- **Remember fire safety is your personal responsibility**
